

Electronics/control engineer astronomical instrumentation and telescopes

Ref. ATP-2021-145

The Institute of Astronomy at KU Leuven is a young and vibrant research group of about 80 researchers, engineers and administrative staff. The institute is part of the Department of Physics and Astronomy, which conducts research in various domains in modern physics. It contains several research units comprising activities in physical acoustics and thermal physics, biophysics, nuclear and radiation physics, semiconductor physics, solid state physics, theoretical physics, astronomy and (astro)physics education research. The department belongs to the Science, Engineering and Technology Group, Faculty of Science, and currently counts about 370 staff members.

The Institute of Astronomy is a partner in a wide range of international networks and research projects developing astronomical telescopes and instruments for international observatories and space missions. Some examples of these projects are:

- For the European Extremely Large Telescope (ELT, operational in 2024) in Chile, we are developing the control system for the mid-infrared instrument METIS.
- For the Very Large Telescope Interferometer (VLTI), we are leading the Hi-5 instrument. The primary scientific goal of Hi-5 is to image young planetary systems within the snow line with a new dedicated high-contrast interferometric instrument for the VLTI.
- To measure accurately the mass of exoplanets discovered by the PLATO space mission, we are building MARVEL, an array of 4 telescopes connected via optical fibers to a high resolution spectrograph.
- The Mercator Telescope On La Palma (Canary Islands, Spain), operated by the Institute of Astronomy.

For these developments we are looking for an electronics engineer with a passion for control technology and astronomy who will work in a team of 5 software and electronics engineers.

Responsibilities

Together with your colleagues, you will work on:

- Design and implementation of the control systems (mainly based on PLC hardware) for:
 - o The Hi-5 instrument (various actuators, fast steering mirrors, filter wheels, beam combiner, and spectrograph);
 - o The MARVEL project (telescopes, domes and spectrograph).
- Development, integration and testing of prototypes and production versions of the PLC control system for the METIS instrument.
- Automation of test setups in our laboratory for small spacecraft testing.
- Preparation of wiring schematics and manufacturing drawings of control cabinets.
- Preparation of design documentation for project reviews.

Profile

- You obtained a relevant master degree in electronics, electro-mechanics or control engineering or equivalent through experience.
- You show a passion for high-tech applications and are willing to continue to study and learn about novel technologies in (industrial) electronics, electro-mechanics and IT.
- You show a passion for programming, preferably in Python, C++ or a PLC language, and preferably coding software that interacts with real hardware (sensors, actuators, control loops, etc.).
- A good command of the English language, able to understand and write technical reports and to orally present your work in an international consortium.
- You are a good team player that is looking forward to collaborating with colleagues in Leuven as well as at institutes abroad.
- Short missions abroad (to our consortium partners in various European countries, to La Palma, etc.) are not a problem for you.
- Relevant assets:
 - o Practical experience with PLCs and Beckhoff TwinCAT
 - o Good knowledge of control engineering
 - o Good knowledge of CAD software
 - o Experience with VHDL / FPGA developments
 - o Interest or some knowledge about space, astronomy and astronomical observations.

Offer

We offer a full-time contract for 1 year, extensible to an indefinite period of time. This function will be remunerated in the KU Leuven salary scale 7, 8 or very exceptionally scale 9, depending on your relevant experience and competences.

You are offered the opportunity to work in a multi-disciplinary and international team in a vibrant research environment. You will be encouraged to continuously learn and deploy your own initiatives.

Interested?

For more information please contact Mrs. Martien Vanmechelen, tel.: +32 16 37 61 47.

Contact for specific questions on the contents of the job: Gert Raskin (gert.raskin@kuleuven.be), Instituut voor Sterrenkunde, KU Leuven, Celestijnenlaan 200D, 3001 Leuven, tel.: +32 16 32 33 46

You can apply for this job no later than March 25, 2021 via the online application tool :
